Go deeper into your music, work, and passions — with no noise in the way. Plus with Amazon Alexa, you can enjoy entertainment, get information, and manage your day. Just ask. Listen to music, podcasts, and more without looking at your phone. Or, if you're not an Alexa user, use it to adjust among three levels of noise cancellation. That way, you can block out the noise and just hear the music.

Or use the included audio cable for up to 40 hours in wired mode. Alexa, what's the weather. Alexa, add milk to my shopping list. Alexa, how late is Starbucks open. Alexa, lock the doors. Concentration goes to the next level. You get deeper into your music, your work, or whatever you want to focus on. That's the power of Bose QuietComfort 35 wireless headphones II. Put them on and get closer to what you're most passionate about. And that's just the beginning. QuietComfort 35 wireless headphones II are now enabled with Bose AR — an innovative, audio-only take on augmented reality. Embedded inside your headphones is a multidirectional motion sensor. One that Bose AR can utilize to provide contextual audio based on where you are. Unlock Bose AR via a firmware update through the Bose Connect app. They're Alexa-enabled, too, so you can enjoy entertainment, get information, and manage your day — all without looking at your phone. Adjust your level of noise cancelling between three settings using the Action button or the Bose Connect app. Volume-optimized EQ gives you balanced audio performance at any volume, and a noise-rejecting dual-microphone system provides clearer calls, even in noisy environments. And with easy Bluetooth pairing, 20 hours of battery life, and a durable, comfortable fit — you can keep the music or the quiet going all day long. Bose AR enhanced apps are currently available for iPhone and iPad users only. Apps for Android devices are in development. See full review Digital Trends Onsite Associates Program Amazon calculates a product's star ratings based on a machine learned model instead of a raw data average. The model takes into account factors including the age of a rating, whether the ratings are from verified purchasers, and factors that establish reviewer trustworthiness. Please try again later. James B. 5.0 out of 5 stars My wife hates them. My wife hates them she would give it 1. I put them on and that's it. I can't hear her any more.

I would agree, they both sound excellent. The Bose won the test for its noise cancellation, performance talking to people on the phone, comfort on my head, and sound processing. Phone performance I compared how the Bose and the Sony sounded when recording and playing back my voice with a fan running in the background. The Bose sounded like I was holding an old-fashioned handset and talking in a quiet room intimate and zero background noise. The Sony sounded like I was on speaker phone, and I could hear some background noise. As a control I also recorded using neither and it sounded like I was on speaker but also I could hear more background noise. This feature is important to me since I spend a lot of time on the phone and prefer my clients to not hear any background noise. Sound quality The Bose and Sony both have excellent sound quality for playing music. I personally prefer the sound the Sony produces. The Sony iPhone app lets you choose your levels on an equalizer, and I like that. However, the Bose hears what type of music

you're playing and automatically optimizes the sound, and it does a really good job. While I would prefer to be able to set the levels if I so choose, I also appreciate that Bose is making it all easy for me, so I can truly listen to my music on random and not have to fuss with levels. The Bose iPhone app doesn't do very much at all. The Bose on the other hand just stops the noise. There is no delay, no white noise, just quiet and your music. Controls The Bose controls are intuitive to find and to use. I like that the on/off control is a switch to flip on and off rather than a button to find. Also, you can use this button to switch between devices, for example between your phone and iPad and your TV amplifier. The right earcup has three small buttons in a row together, and they control a lot of things. The left earcup only has the Google Assistant button, which I programmed to instead control the amount of noise cancellation high, low, off.

Song playback sounds much better with noise cancellation on high, and I don't think that has to do with noise I was in a quiet environment; the bass sounds enhanced with noise cancellation on for some reason. In comparison, the Sony lets you swipe the earcup itself to control volume, pause, play, skip, etc. This seems great in theory, but in practice if I bumped the earcup adjusting my glasses or whatever, the music would pause. I found the Sony to be somewhat buggy in that regard. It would stop playing at times and I had to pick up my phone to get the music restarted, which is annoying. I found the Bose controls to be more intuitive and consistent. Also, when you switch them on a voice tells you how much battery you have left, which is handy. Comfort The Bose QuietComfort truly is comfortable. The earcups are soft, there is not a lot of clamping, and the top band is padded so it's less annoying on the top of the head. In comparison, the Sony do have more clamping which was uncomfortable over glasses. I am a pilot and wear a similar headset, so I'm familiar with how headphones feel after a few hours. One ear is not going to be as comfortable for long term wear as earbuds would be, but I was willing to make that tradeoff to get superior sound quality. Style The Bose are more streamlined to my head. I purchased these headphones for their noise cancellation abilities. I am an application developer and wear them at work because I am easily distracted. I don't even listen to music with them. I also use them for WebEx and Skype calls with clients. The built-in microphone is great and the noise cancellation is helpful during those calls as well. Battery life is extremely good. I can go an entire week without having to charge the headset. An added feature is that the Bluetooth feature will allow you to connect to and hear audio from two sources at the same time. This is great if you want to connect to your iPhone and laptop at the same time.

After a month of use, the headphones button would no longer work to pair to a new device. It would still power on and off, just the pairing didn't function. Bose support was difficult to deal with. At first the support technician didn't think there was anything wrong with the headset. After a frustrating conversation, he relented and sent me instructions for sending them back to the manufacturer. This would mean that I would be without my precious headphones for at least two weeks. The next day prior to dropping the headphones at UPS I came across The Bose Store at Tysons Corner Mall. I had the headphones with me so I decided to speak to one of the employees there. After a very brief conversation, and even though I purchased these through Amazon, he walks over to a display, gets me a brand new set of headphones and proceeds to exchange my defective ones for the new set. No other questions asked. I wish customer support would have been as easy to deal with. ANC was nice and Bluetooth stable. Unfortunately, the Google Assistant app decided to update my firmware to 2.5.1 by itself!! Seriously Google Ask me for permission first. Afterwards, ANC got noticeably worse. I played various background noise on my speakers and there was no difference between low and high ANC. Bluetooth skipped every 2 seconds if both Mac and iPhone were connected whereas it worked seamlessly before. Symptoms didn't go away after updating to the 3.1.8 firmware via Bose's website. These are getting returned. If you get these headphones, DO NOT update them please. If it ain't broke don't fix it. This happened when opening the app. The Bose QC35 Series 2 and the brand new Sony WH1000XM3. I have used both for walking, aeroplane travel, travel on the underground in London and general stuff like walking and around the house. The Sony's Greatly improves over

the series 2 version of the headphones. They are a right fitting headphone, very loud and impressive base.

You can fiddle with the base, treble and noise cancellation until your hearts content as it's all adjustable via the app. The best thing about these is the noise cancellation. It is the market leader and has overtaken the Bose in this area. They are comfortable and made to high standards. You can even adjust the noise cancellation at different altitudes such as in the aeroplane and this works well. I actually fell asleep with them on recently which was a first as I hate flying. Wearing them and walking I did feel a bit weird for some reason. I think it was the noise cancelling software, perhaps it's a little too good. The Bose's They feel lighter, easier to live with, more roomy than the Sony's and not as tight a fit which I think makes the more comfortable. The noise cancellation is excellent and you can set them to high, low and off levels. The noise cancellation works very well, however not quite as good as the Sony's, which you can fiddle with until your hearts content with the app. The sound quality is brilliant, you do get more mid level sound with the Bose, though the Sony's were definitely louder with more richer base. I wish you could adjust the base and treble but you can't or at least I can't find out how you do it. You can adjust these setting with the Sony's in the app. The winner for me was the Bose. They are lighter, your ears don't get hot or sweaty when wearing them and they have more room. Yes the noise cancellation is very slightly substandard to the Sony's when side by side testing though still pretty amazing and they aren't as loud, but they are the best for all day wearers. If I only wanted to use my headphones for an hour or two per day, the Sony's would win hands down although I found them a little tight for my big head. I advise you to try both pairs, but consider the amount of time you'll wear them for each day as comfort is really important when you have to live with these headphones.

Consider the weight you like to have on your head, comfort around your ears such as the fit and tightness. Comfort becomes more important than being able to fiddle with sounds such as base and noise cancellation when you don't actually like the things in your head. So please buy the most comfortable and then everything else will fall into ace and you'll love your decision between these two amazing brands. Last point. If you go into a busy airport and watch the commuters in London you'll quickly notice most people are wearing one brand in particular. You can guess which it is. Sorry, we failed to record your vote. Please try again Ultraleicht und extrem bequem zu tragen, selbst nach Stunden. Und das liebe Leser, ist schon ein wichtiger Punkt, welchen nur die wenigsten KH erfüllen leider. Die Bedienung ist Dank der gut fühlbaren haptischen Knöpfe auf der rechten Seite gut zu bedienen. Der BOSE ist trotz seiner leichten Bauform sehr robust. Die BOSE Connect.app sollte man sich auf jeden Fall über sein Handy laden. Die Latenz ist so groß, dass meistens die Mäuler bereits geschlossen sind, während über die Ausgabe noch der Text ertönt. Geht gar nicht!! Aufgefallen ist mir, dass bei Deaktivierung von NoiseGuard die Latenz etwas niedriger ist. Sorry, we failed to record your vote. Please try again Things I did not know Sound distorts at max volume There's a crackling noise every now and then You can do a google search to see that they are known issues and many users are facing these. I got these for 20k during the sale but still unacceptable. It was so shocking to me that I went to a bose store to check if they are genuine or not b to demo a pair to see if the issues exist in the demo as well. They were genuine and the same issues existed in the demo pair as well. Thank you so much Amazon for the quick delivery and for processing the return. I would have been stuck with these if I would have bought them elsewhere. Sorry, we failed to record your vote.

Please try again Bei einem selbstverschuldeten Defekt der eigentlich leicht reparierbar wäre sofern es Ersatzteile gäbe bietet BOSE lediglich einen Austausch zu Kosten höher als dem aktuellen Marktpreis an. Von einem Markenprodukt hatte ich das so nicht erwartet aber die Erfahrung wird wohl vielfach so bestätigt. Auch Fachwerkstätten haben keinen Zugang zu Ersatzteilen. Sorry, we failed to record your vote. Please try again Voy a explicar un poco el funcionamiento y una pequeña

comparativa con sus rivales. **SONIDO.** Estos Bose me han sorprendido gratamente en cuanto al sonido y potencia. El sonido es muy claro, equilibrado y con unos bajos potentes. Escucho todo tipo de musica, desde clasica, jazz hasta pop, rock y electronica. La musica electronica suena muy bien gracias a los potentes bajos. Los medios son correctos y los agudos me parecen equilibrados respecto al resto. El resto de estilos que escucho suenan muy bien aunque en la musica sinfonica tengo que ecualizar para que los bajos destaquen un poco mas con el resto de frecuencias. **CANCELACION DE RUIDO.** El sistema de cancelacion es muy bueno. Reduce practicamente a nada el ruido exterior pero hay elementos como voces cercanas que si pasan. Hay aspectos que parecen como de magia. Es realmente bueno e indicado para aislarte del exterior y escuchar musica sin distracciones y ademas a un volumen inferior nuestros oidos lo agradeceran. Tiene tres niveles alto, medio y desactivado. Se puede cambiar comodamente desde el boton habilitado para ello en el auricular izquierdo tambien sirve para el Google Assistant. Con respecto a sus rivales, la cancelacion de los Beats es muy inferior pero la de los Sony a mi me parecio superior a estos. **MATERIALES.** Como todo en la vida tiene pros y contras. El material principal usado en su construccion es el plastico y en principio solo veo en metal un refuerzo de la diadema. Con ello, el peso es muy bajo, haciendolos ligeros y practicos.

La parte que apoya en la cabeza esta hecho de una especie de piel sintetica y la superior tambien. Ambas son muy agradables al tacto. Los auriculares estan muy bien acolchados y con tacto muy suave. Las bisagras estan reforzadas con tornillos metalicos. Esto me da sensacion de mejor durabilidad los Beats pierden mucho en este aspecto. **COMODIDAD.** Son realmente muy comodos. La disposicion de las orejeras en oblicuo ayudan a que las orejas no toquen en ningun momento las paredes. Doy constancia de ello porque no es que tenga unas orejas pequenas, mas bien pecan de grandes. Los puedes llevar durante horas y no te vas a sentir agobiado los Beats me apretaban un poco demasiado y a veces me dolia la cabeza y los Sony no me resultaron tan comodos como estos. **BATERIA.** La bateria no esta mal. El fabricante dice hasta 20 horas pero sus rivales en este aspecto tienen bateria de mayor durabilidad. Los Sony me ha durado mas la bateria que en estos. Los Beats tambien tienen mejor bateria. A su favor, tienen carga rapida y en unos pocos minutos tienes 3 horas de autonomia. La carga total de la bateria se consigue en poco mas de dos horas comprobado. **CONNECTIVIDAD.** Se conecta muy rapido con los aparatos, en unos pocos segundos. Que recuerde dos dispositivos al mismo tiempo te facilita mucho la vida para coger llamadas las cuales se escuchan genial y te oyen muuuucho mejor que en los Sony, que me oian fatal en las llamadas. El que tengan made for iphone y ipad garantiza que la compatibilidad con Apple sea total, rapida y eficaz. No he perdido la conexion en ningun momento. Es una conexion de momento muy buena, rapida y estable. **APP.** Desde la app se puede cambiar el nombre del dispositivo, ajustar la cancelacion de ruido y tambien cambiar de un dispositivo a otro sin necesidad de tener que entrar a los ajustes. Podras cambiar la configuracion del boton del auricular izquierdo entre dos opciones cancelacion del ruido o bien el Google Assistant.

Las opciones de la App es muy justita, pero lo basico y necesario lo puedes manejar. La app de Sony es muy superior y mas configurable. **GOOGLE ASSISTANT.** Es la diferencia entre este modelo y el anterior. Debes instalar la App de Google en tu dispositivo iOS. Una vez instalado, configuras muy facilmente tus auriculares. Luego manteniendo presionado el boton le puedes pedir cosas al asistente. La diferencia principal con Siri es que te dice cosas. Por ejemplo le pides las ultimas noticias y te las canta perfectamente por los auriculares. En este aspecto una pasada, es como si tuvieras un noticiario personalizado en todo momento. Algo para seguir jugueteando. Sus rivales, esto no lo tienen. **DISEÑO.** Yo me he comprado los plateados. Me parecen mucho mas bonitos que los negros. Estos ultimos son algo mas discretos. No son excesivamente grandes aunque. Los Sony me dio la sensacion de ser mucho mas grandes y eso me hacia verme un cabezon mas grande de lo habitual. **ACCESORIOS.** Viene con un estuche negro rigido muy cholo y fiable para la seguridad del producto. En el interior viene un cable jack a jack muy sencillo y sin microfono y un cable usb para

la carga. Los cables podrian incorporar el microfono y ser de mayor calidad. El modelo anterior incluia en el estuche el adaptador para el infoentretenimiento del avion. En este modelo se lo han cargado y ya no lo incluyen. Lastima porque debe ser muy barato de fabricar y tenerlo en el estuche vendria bien a la hora de coger un avion. En resumen es un producto caro pero si inviertes muchas horas escuchando musica, viendo series y quieres estar tranquilo sin ser molestado por el exterior, es una muy buena opcion a tener en cuenta. Lo malo es el precio, es caro, aunque viendo a sus rivales, lo veo relacion calidad precio por encima. Estoy contento con su sonido agradable y equilibrado y su comodidad que es excelente. Asi que entre todos los que he probado, sin dudar lo me quedo con estos. Sorry, we failed to record your vote.

Please try again Aqui mis impresiones Ventajas Comodidad. Los Bose son los mas comodis para las orejas, tienen mucha amplitud en la zona donde entran las orejas y eso permite que no tengas problemas desde el minuto uno que te los pones. Ademas los altavoces estan puestos de forma oblicua y no plana, para que entren mejor las orejas y no roces con el exterior de ellas, esto tambien lo tienen los Sennheiser, los Sony no. Las almohadillas de las orejas de estos Bose son bastante comodis, la superior no tanto. En cuanto a almohadillas blanditas, la palma se la lleva Sony, son increiblemente comodis, pero sus pegos son el peso Pesan casi 50 gramos mas que estos Bose y que los Sennheiser y el tener los altavoces planos. Asi que en cuanto a comodidad Pese a que la almohadilla superior se me ha clavado en alguna ocasion en la coronilla los Bose son los mejores Seguidos de los Sony y de los Sennheiser, aunque estan los 3 muy parejos. Botones en lugar de tactil. Los Sony y los Sennheiser tienen un panel tactil que a veces hace que te equivoques, con los botones en los Bose no te vas a equivocar. Esto lo incluyo a ventajas porque para cierto tipo de gente el panel tactil es un incordio. Ademas a mi me ha gustado mucho que la forma de apagarlos y encenderlos sea con un slider o boton deslizante, los Sennheiser para mi tienen la forma de apagarse mas comoda, pero los Sony por ejemplo tienes que apretar el boton durante un rato y es un conazo, con el slider, apagas los Bose sin esperas. Buena cancelacion de ruido. Tengo que decir que los Bose tienen buena cancelacion de ruido, un pelin mejores que las de los Sennheiser, peero no son mejores que las de los Sony Esos estan a otro nivel. Boton de Google Assistant. Este boton es realmente util para que google te lea las notificaciones del movil, lo tienen tambien los Sony pero no los Sennheiser Los Sennheiser solo te permiten llamar al asistente para decirle comandos por voz. El mejor emparejamiento a dos dispositivos.
